## TABLE OF CONTENTS

VOLUME 254, April 2023

---

### IN-DEPTH REVIEW: ALZHEIMER'S DISEASE

- 1 Inflammation activation in traumatic brain injury and Alzheimer's disease  
*Nathan H. Johnson, Juan Pablo de Rivero Vaccari, Helen M. Bramlett, Robert W. Keane, and W. Dalton Dietrich*
- 13 Connectome-based biophysics models of Alzheimer's disease diagnosis and prognosis  
*Justin Torok, Chaitali Anand, Parul Verma, and Ashish Raj*
- 24 Pin1 and Alzheimer's disease  
*James S. Malter*
- 34 Targeting caspase-2 interactions with tau in Alzheimer's disease and related dementias  
*Steffen Pockes, Michael A. Walters, and Karen H. Ashe*
- 41 Vascular contributions to Alzheimer's disease  
*Laura B. Eisenmenger, Anthony Peret, Bolanle M. Famakin, Alma Spahic, Grant S. Roberts, Jeremy H. Bockholt, Kevin M. Johnson, and Jane S. Paulsen*

### ORIGINAL RESEARCH ARTICLE

- 54 Ischemia challenged epicardial adipose tissue stem cells-derived extracellular vesicles alter the gene expression of cardiac fibroblasts to cardiomyocyte like phenotype  
*Finosh G. Thankam, Sharona Sedighim, Rebecca Kuan, and Devendra K. Agrawal*
- 68 A CD36 transmembrane domain peptide interrupts CD36 interactions with membrane partners on macrophages and inhibits atherogenic functions  
*Wenxin Huang, Renhao Li, Jue Zhang, Yiliang Cheng, Devi P. Ramakrishnan, and Roy L. Silverstein*
- 77 Pathophysiological characterization of the Townes mouse model for sickle cell disease  
*Juliana Alvarez-Argote, Theresa A. Dlugi, Teresa Sundararajan, Annie Kleynerman, Mary L. Faber, William M. McKillop, and Jeffrey A. Medin*
- 92 Adult hypertensive rats are more prone to gut microflora perturbation and fibrosis in response to moderate restraint stress  
*Tiantian Wang, Han Gao, Chengwei He, Lei Gao, Boya Wang, Rongxuan Hua, Yixuan Du, Chen Liang, Shuzi Xin, Hongwei Shang, Ying Wang, Wen Wang, and Jingdong Xu*
- 115 Disulfiram accelerates diabetic foot ulcer healing by blocking NET formation via suppressing the NLRP3/Caspase-1/GSDMD pathway  
*Shuofei Yang, Yu Feng, Liang Chen, Zheyu Wang, Jiaquan Chen, Qihong Ni, Xiangjiang Guo, Lan Zhang, and Guanhua Xue*
